Work History

2023-11 - 2024-09

Front End Developer

BIYŌstore, Porto Alegre, Brasil

Responsible for maintaining the company's vegan cosmetics E-commerce, and in charge of creating new features and functionalities based on design systems. That is, updating and maintaining the code, correcting errors and adjusting as necessary throughout the application's life cycle .

Converting the designs created in Figma (Design Software) into HTML, CSS and JavaScript code was also one of the essential responsibilities in this task, ensuring that the implementation was faithful to the design, respecting proportions, spacing, cores, typography and other visual elements.

Education

2023 - present

Bachelor's degree: Computer Systems Analysis;

QI College & tec School, Porto Alegre, Brasil

Courses

2022-05

Certified Tech Developer

Digital House Brasil (Rocketseat)

- **Why this specialization:** I took part in this course with the aim of knowing and learning more about the current professional market with an emphasis on business, communication and full stack web development.

- **TimeLine between Course and College:** While I learned and put into practice the knowledge given by this course, I also applied for vacancies in the area and ended up being hired as a front-end developer by BIYŌstore, and consequently entering the faculty of Systems Analysis and Development to delve deeper into the concepts and fundamentals of computing and information management itself.

Projects

2023-09 - 2023-12

CarHub - Rental Car

Car rental system

- **What was the purpose of the project:**
CarHub was an intuitive and complete project that I developed at the end of the Certified Tech Developer bootCamp as proof that I learned all the concepts and fundamentals of web development.

- **Project aim:**

The intention of the project was created based on a business idea for car rental companies to not only sell their cars but also be able to rent them while not making a profit on the sale, it would also be a way for the customer to test the car for a certain time.

- **How the system was developed:**
  The entire system was made in Next.js MUI and javaSpringboot, with Next being for route manipulation and better data manipulation, MUI for creating ready-made and reusable design components, thus facilitating the development of the interface, and last but not least Java for creating the system's API, routes and data security Using JWT.

Certificates

2023-12   **Certified Tech Developer**

Digital House Brazil (Rocketseat)

Certificate of compliance with all requirements in accordance with the Certified Tech Developer bootcamp regulations in a total of 1,568 hours related to hard and soft skills taught to the student to become a professional developer suitable for the current job market.
